

How to Use a Lucet Tips for Beginners

Use a strong, smooth thread that will not break while working with it. Crochet cotton and pearl cotton work well.

Mark one side of your lucet with a permanent marker so that you know where to begin. When you stop working, leave this side face up.

The more you work with your lucet, the easier it should become. Don't get discouraged if your cord is not as even as you want it to be at first!

The key to an even cord is keeping tension the same throughout. This comes with practice.
